Manitoba agriculture yearbook, 2001

Annual.
Chiefly tables.
Continues: Yearbook Manitoba agriculture.
ISSN 0084-3865.

1. Agriculture - Manitoba - Statistics.
2. Agriculture - Economic aspects - Manitoba - Statistics. I. Manitoba. Manitoba Agriculture and Food.
I. Title: Yearbook Manitoba agriculture.

FOREWORD

This publication is the thirty-ninth in the Yearbook series initiated in 1963. The same format, which includes recent and historical data from 1960, has been continued for the convenience of users. Minor changes are made annually whenever new or more detailed information becomes available. Please note that some totals may not add due to rounding and metric/Imperial conversions. Statistics published are based on available information as of August 1, 2002.

Cooperation between Statistics Canada and Manitoba Agriculture and Food is maintained to secure the best possible agricultural statistics. The assistance of many contributors of information received from other government departments, farm businesses, farmer organizations and farmers is appreciated. Appreciation is also extended to Carol Gunvaldsen, Crops Industry Analyst, for providing input and to Rose Anne Burdeny, Statistical Clerk, for inputting data, typing and proofing the manuscript.

As the development, compilation and assembly of material was done by the Market Analysis and Statistics Section, Program and Policy Analysis Branch, suggestions for improving the content of the manuscript can be sent to:

[1] Refers to all persons who are members of a farm operator's household, living on a farm in a rural/urban area.

[2] Refers to sparsely populated lands lying outside urban areas.

[3] Refers to areas, which have minimum population concentrations of 1,000 and a population density of at least 400/sq km, based on the previous census population counts. All territory outside urban areas is considered rural. Taken together, urban and rural areas cover all of Manitoba.

2001 VALUE OF FARM PRODUCTION

The total value of agricultural production in Manitoba in 2001 was estimated at a record $3,669.4 million. This represented an 8.5 percent increase from the revised 2000 value of $3,381.8 million. The value of crop production was $1,808.3 million, up by 2.8 percent from the 2000 value, but 14.9 percent below the 1996 record value of $2,125.1 million. Increased prices of almost all crops, contributed to the higher crop value in 2001.

Livestock production was valued at a $1,790.3 million, 14.7 percent above the 2000 level. The increase in livestock production value in 2001 was mainly due to the larger number of hogs marketed and higher prices for cattle and hogs.

FARM CASH RECEIPTS

Farm cash receipts include proceeds from the sales of agricultural products sold off farm through regular market channels. All deficiency, subsidy, supplementary and final Canadian Wheat Board payments are included. In 2001, total cash receipts were estimated at $3.69 billion, 16.2 percent above the 2000 level of $3.17 billion.

CHART 7: Farm Income and Expenses, 1971 – 2001

FARM NET INCOME

Realized net farm income is determined by adding cash receipts, total payments and income-in-kind and subtracting net operating expenses and depreciation charges. In 2001, due to a 16.2 percent increase in farm cash receipts, a 5.4 percent rise in operating expenses and a 1.4 percent increase in depreciation, realized net farm income rose to $668.4 million, 126.2 percent above the 2000 level. Realized net farm income per farm in 2001 was about $31,700, compared to the revised 2000 value of about $13,500 (* based on an estimate of 22,000 farms in 2000 and census farms of 21,071 in 2001). Total net income includes the value of inventory change. Mainly due to the reduced value of livestock inventories and smaller crop inventories at the end of 2001, total net income rose by less than realized net farm income, up by only 38 percent from $478 million in 2000 to $660 million in 2001 or $31,300 per farm.

CROP PRODUCTION

GENERAL CONDITIONS & CROP PROGRESS

April/May - There was some seeding across all regions by April 14, 2001, although rain interrupted fieldwork and slowed progress after that. Soil moisture was excessive across much of the province, in contrast to drying conditions in Saskatchewan and Alberta. Very little seeding was done by mid-April, and in many areas, field saturation and flooding worsened, repeating the early spring levels. Progress was slow, and weather generally wet and cool, particularly in the central and eastern areas. By mid-May, overall seeding had reached about 14 percent and, by late May, close to one-third. Rainfall eased in the last week of May and allowed western areas of the province to reach close to 80 percent seeded, with progress much slower in higher-moisture areas of the Northwest and in much of the rest of the province. Approximately half of the province's corn, peas, sunflower seed, and potatoes were seeded by late May. Excess soil moisture was also keeping livestock off pasture and/or on winter feed in some areas, and was causing some reseeding.

June – By the start of June, Manitoba still had a considerable area unseeded, while Saskatchewan and Alberta were near completion. The first week of June was dryer and allowed a rush of planting on all but the wettest low-lying spots and the wettest fields, just in time to meet crop insurance deadlines. Showers, thunderstorms, and cool temperatures had soil moisture at "good" levels by the second week of June in most areas. In much of southern Manitoba, the southern Interlake, and on heavy clay soils in the Eastern Region however, there was ponding and drown-out of new-crop growth, particularly in low spots. By June 18, 95-100 percent of the seeding was complete, but the amount unseeded increased in all regions. Cool weather kept crop development slow, with some frost damage to canola. There was little first cut in forages because of persistent field saturation, and little pasture growth, forcing farmers to put cattle onto hayfields. By the end of June, fall rye and winter wheat crops were in head or close to heading. More heat-unit sensitive crops (e.g. corn, sunflower, beans) were growing slowly. Early fields of winter wheat, canola, pulses and alfalfa were starting to flower. An estimated 650,000 acres were summerfallowed in 2001, compared to 375,000 acres in 2000, and a flood-inflated 1.5 million acres in 1999.

July - Heavy June rains slowed the drop in river levels, and around southern Manitoba's Souris River, low-lying haylands were flooded until late July. By mid-July, Manitoba's winter-sown crops were starting to turn colour and ripen, and spring-sown cereals were shot-blade to heading. About 33 percent of Manitoba's hard red spring wheat, 18 percent of the durum and 20 percent of Manitoba's barley was heading, with about 30 percent of the canola flowering, and much of the corn knee-high. Most crops were reported to be in good condition in southern Manitoba, with rainfall improving conditions in the Northwest. Heavy rains added to the excess moisture situation in the east side of the province, causing yellowing in cereals, canola, flax and some beans.

August - Swathing of Winter wheat, fall rye, early feed peas, barley and canola began during the first week of August, helped along by a week or so of extreme, drying heat. Early spring cereals had begun ripening, and most of Manitoba's canola and flax was in bloom, although most of the Southwest crop was already podding or bolling. Swathing was widespread by about August 12, with some combining. Recurrent episodes of very heavy rainfall and winds caused lodging and water-stress in many fields in the Southeast, Interlake, and Central Region. By the end of August, Manitoba was about 45 percent harvested. Yields and quality were variable, with a considerable amount of fusarium on wheat and barley, and disease and waterlogging on field beans. In the Interlake area, the timothy seed harvest was completed, with yields near normal.

September/November - By mid-September, the harvest was about 80-90 percent complete across the province. By the end of the month, harvesting was about 99 percent complete, with some oilseeds and special crops (beans, sunflowerseed) remaining. By mid-October, only a few special crops remained to be harvested. Increasingly dry conditions in the western side of the province reduced fall fieldwork and pasture growth, and hay feeding was required early than usual.

As in 2000, the high summer humidity of 2001 was conducive to a high incidence of Fusarium Head Blight (FHB). It had already spread widely across Manitoba in 2000, reducing yields because of shrunken kernels, and causing severe downgrading and loss of market returns in much of the wheat and barley. As in 2000, only 30-40 percent of the province's wheat and barley may have been totally fusarium-free. *F. graminearum* continues to be the species responsible for almost all the FDK in Manitoba, although the incidence of other types increased in 2001. The incidence of FHB was greater in 2001 than in 2000, although the severity in some Central Region wheat crops may not have been as great. The Canadian Grain Commission (CGC) estimated that about 69 percent of the Manitoba wheat it sampled in 2001 had some degree of FHB (61percent in 2000, 40.5 percent in 1999, 43.1 percent in 1998, 40 percent in 1999, 34.7 percent in 1996). Durum is extremely susceptible to FHB, affecting much of the crop (77 percent in 2000). Losses are likely to be at least comparable to the yield loss from FHB

The Canadian Grain Commission (CGC) estimated that about 69 percent of the Manitoba wheat it sampled in 2001 had some degree of FHB (61percent in 2000, 40.5 percent in 1999, 43.1 percent in 1998, 40 percent in 1999, 34.7 percent in 1996). Durum is extremely susceptible to FHB, affecting much of the crop (77 percent in 2000). Losses are likely to be at least comparable to the yield loss from FHB in 2000, estimated at 10 percent in spring wheat, 1 percent in winter wheat and 5 percent in barley (5 percent in wheat and 3 percent in barley in 1999), along with individual yield losses as high as 30 percent, and lost revenue approaching 50 percent.

In 2001, average provincial **protein levels** were very high, averaging an estimated 15.4 percent over all grades of Spring Wheat (14.2 percent in 2000, 14.2 percent in 1999), and 24 percent in dry yellow peas (23.7 percent in 2000), according to the CGC post-harvest survey. Manitoba's oat plantings have shifted increasingly to new, very high yielding **varieties**: about 85 percent of crop insurance inspections in 2001 were new or numbered varieties (78 percent in 2000, 54 percent in 1999), with about 60 percent tan (63 percent, 68 percent) and 36 percent (31 percent, 22 percent) white oats. More than 75 percent of Manitoba's barley plantings are 6-Row malting varieties, about 20 percent 2-Row, and about 5 percent hulless (2 and 6-Row). Approximately 65 percent (87 percent in 2000, 78 percent in 1999) of the Manitoba canola samples tested by the CGC graded No.1Canada, with an average of 42.6 percent oil and 22.1 percent protein (42 percent oil and 22 percent protein in 2000), with another 30 percent (9.5 percent in 2000, 18 percent in 1999) grading No.2. No. 1 flaxseed averaged about 44.3 percent oil and 23.4 percent protein, with the oil containing 56.4 percent linolenic (43.7 percent oil, 22.4 percent protein, 57.5 percent linolenic in 2000).

WHEAT

About 1,582,200 hectares of wheat (3,910,000 acres) were harvested in 2001. Total production was estimated at 3,430,600 tonnes (126,050,000 bushels), a decrease of 20 percent from the 2000 level. The 2001 wheat crop had an estimated value of production of $477.0 million, a 6.8 percent decrease from the revised 2000 value of $511.7 million. The area harvested, average yields and total production for 2000 and 2001 are shown below.

Durum Wheat

Durum wheat is included with total wheat production statistics. In 2001, the harvested area was estimated at 20,200 hectares (50,000 acres), down by 62 percent from the 2000 level. The average yield was 2,080 kilograms per hectare (31 bushels per acre) compared to 2,690 kilograms (40 bushels) in 2000. Total production was estimated at 42,200 tonnes (1,550,000 bushels), 30 percent of the 2000 level.

The average yield was 2,080 kilograms per hectare (31 bushels per acre) compared to 2,690 kilograms (40 bushels) in 2000. Total production was estimated at 42,200 tonnes (1,550,000 bushels), 30 percent of the 2000 level.

OATS

Total production of oats for grain in 2001 decreased to 748,000 tonnes (48.5 million bushels) with a total farm value of $123.7 million, up by 29.0 percent from the value of $95.9 million in 2000. This does not include the value of the oats cut for hay or silage. In 2001, about 44,600 hectares (110,000 acres) of oats were planted and cut for hay or silage.

BARLEY

Barley production in 2001 was 1,234,500 tonnes (56.7 million bushels), a decrease of 24 percent from the 2000 level. An estimated 445,200 hectares (1,100,000 acres) were harvested, yielding an average of 2,770 kilograms per hectare (51.5 bushels per acre). The total farm value of production was $156.3 million, a decrease of 11.1 percent from the revised 2000 level, not including the value of the crop cut for hay or silage. The area, yield and production of the 2000 and 2001 barley crops are shown below. About 28,300 hectares (70,000 acres) were planted and cut for fodder in 2001.

RYE

Total farm value of rye production was estimated at $4.45 million in 2001, 13.2 percent more than in 2000. The harvested area was 18,200 hectares (45,000 acres) in 2001 compared to 22,300 hectares (55,000 acres) in 2000. The average yield was estimated at 2,070 kilograms per hectare (33.0 bushels per acre) in 2001 compared to 2,510 kilograms per hectare (40 bushels per acre) in 2000.

MIXED GRAINS

An estimated 14,300 tonnes (0.7 million bushels) of mixed grains were produced in 2001, a decrease of 22.2 percent from 2000. The harvested area in 2001 was 6,100 hectares (15,000 acres), unchanged from the 2000 level. Mixed grains total value of production in 2001 was $1.79 million, 4.6 percent greater than the revised 2000 value of $1.71 million. This does not include the value of the mixed grains harvested as hay or silage.

FLAXSEED

In 2001, 199,400 tonnes (7.85 million bushels) were harvested, down by 3.1 percent from 2000. The decrease in 2001 production was mainly the result of a 4.3 percent decline in yield partly offset by a slightly higher harvested area relative to 2000. The estimated total value of the 2001 crop was $60.0 million, a 23.6 percent increase from 2000.

SPECIALTY CROPS

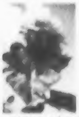
Specialty crops, excluding horticultural, forage seed and hay crops, but including all corn and sunflowers, were harvested on 321,200 hectares (794,000 acres) in Manitoba in 2001, down by one percent from 333,400 hectares (824,000 acres) harvested in 2000. The 2001 specialty crop area represents close to 8.6 percent of the total area of field crops harvested, excluding hay. In general, the weather in 2001 was less favourable than in 2000 for the production of most specialty crops. As a result, crop yields were down for dry peas, canary seed, fababeans, mustard and sunflowers.

Specialty crops grown in Manitoba include those shown in the summary Table 4 and in the historical tables. In addition, there are a number of other specialty crops grown on a limited basis such as horseradish (for enzyme extraction) and borage (for oil). Manitoba also produces such crops as wild rice, and a number of spice or essential oil crops like dill, and, on a limited basis, caraway, coriander, safflower and evening primrose. The investigation and adaptation of new and alternate crops and varieties through field trials are conducted on an on-going basis through the Soils and Crops Branch of Manitoba Agriculture and Food and the Manitoba Crop Diversification Centre in co-operation with producers, industry, the University of Manitoba and Agriculture and Agri-Food Canada. Crops tested or observed in recent years have included borage, chick peas, coriander, fenugreek, horseradish, Japanese millet, Jerusalem artichoke, lathyrus, lupins, oilseed radish, echinacea, ginseng, feverfew, valerian, milk thistle and quinoa, as well as a number of varieties of other major or specialty crops.

Grain Corn

Grain corn plantings in 2001 were estimated at 44,500 hectares (110,000 acres), down by 24 percent from 2000. About 40,500 hectares (100,000 acres) were harvested for grain. The estimated total production of 250,200 tonnes (9.85 million bushels) was down 5.3 percent from the 2000 level. The total value of production in 2001 was estimated at $26.8 million, a decrease of 5.3 percent from the 2000 estimate.

Sunflower Seed



The area seeded to sunflowers in 2001 was estimated at 62,700 hectares (155,000 acres). There were 56,700 hectares (140,000 acres) harvested, down by 3 percent from the harvested area in 2000. The average yield was estimated at 1,600 kilograms per hectare (1,460 pounds per acre), about 6 percent lower than in 2000. Total production of sunflower seed was 92,900 tonnes (204.7 million pounds), 8.7 percent below the 2000 level. Almost 90 percent of Canada's sunflower seed crop in 2001 was produced in Manitoba. About 90 percent of the 2001 sunflower plantings was non-oilseed or confectionary varieties. The value of sunflower seed production was estimated at $32.1 million in 2001, a 1.4 percent increase from the 2000 crop value of almost $31.7 million.

Buckwheat

Buckwheat

All 12,100 hectares (30,000 acres) of buckwheat were harvested in 2001, unchanged from 2000. The average yield was estimated at 1,000 kilograms per hectare (19.2 bushels per acre), compared to 810 kilograms per hectare (15.0 bushels per acre) in 2000. The total production was 12,500 tonnes (575,000 bushels) in 2001, 27.6 percent above the 2000 level. This represented about 75 percent of the total Canadian crop harvested. The total value of the Manitoba buckwheat crop in 2001 was estimated at $4.0 million, with the average price to the producer up by 5.2 percent from 2000.

Canary Seed

The area of canary seed harvested in 2001 was 20,200 hectares (50,000 acres), a 25 percent increase from 2000. The total production was about 11,300 tonnes (25 million pounds) in 2001, a reduction of 34.3 percent from the 2000 crop. Due to decreased production being offset by higher prices, the value of the crop to Manitoba producers increased to $7.46 million in 2001 from $4.64 million in 2000.

Dry Beans

In 2001, about 93,100 hectares (230,000 acres) of dry beans were harvested in Manitoba, about 53 percent of Canada and the largest area of any province. About 48,600 harvested hectares (120,000 acres) were white pea/navy beans, with most of the remaining area in pinto beans and smaller areas in dark red kidney, cranberry or black beans. The total farm gate value of all beans in Manitoba in 2001 was estimated to be $106.7 million, up 74.4 percent from 2000, from a production of 159,900 tonnes (352.5 million pounds).

Dry Peas

The area seeded to dry peas and harvested in 2001 was estimated at 60,700 hectares (150,000 acres), compared to a harvested area of 60,600 hectares (150,000 acres) in 2000. The average yield was estimated at 2,400 kilograms per hectare (35.8 bushels per acre), 9.4 percent below the 2000 yield. Manitoba's total production of 146,100 tonnes (5.37 million bushels), was down by 9.0 percent from the 2000 production, and represented 6-7 percent of total pea production in Canada. The value of the Manitoba crop was estimated at $26.1 million in 2001, 18.9 percent more than in 2000.

Fababeans

In 2001, about 4,000 hectares (10,000 acres) of fababeans were harvested in Manitoba, 34.4 percent less than in 2000. Prices averaged $179 per tonne (8 cents per pound). The smaller 2001 crop of 7,900 tonnes (17.5 million pounds) was worth $1.42 million.

Hemp

Industrial hemp was planted commercially in Manitoba in 1998 for the first time in nearly sixty years. In total, 606 hectares (1,497 acres) of hemp were licensed in Manitoba in 1998. The area increased to 6,500 hectares (16,000 acres) in 1999, but fell to 600 hectares (1,500 acres) in 2001, which produced about 400 tonnes (0.9 million pounds) of clean, dry oilseed. No sales of residual fibre were reported in 2001. Although some of the 2000 and 2001 oilseed crops remained unsold in 2001, the total value of hemp grain and seed production in 2001 was estimated at $0.3 million.

Lentils

The area of lentils seeded in 2001 fell by 72 percent to 4,000 hectares (10,000 acres), while the harvested area decreased to 2,400 hectares (6,000 acres). The average yield was 1,400 kilograms per hectare (1,250 pounds per acre), compared to 1,210 kilograms per hectare (1,080 pounds per acre) in 2000. As a result of the smaller crop area, total production decreased by 79 percent from 16,100 tonnes (35.5 million pounds) in 2000 to 3,400 tonnes (7.5 million pounds) in 2001. The value of Manitoba production was about $0.91 million, compared to a 2000 value of $4.99 million.

TABLE 29: Area and Production of Major Grains & Oilseeds, 2000^R, 2001^P

Agri-cultural Region	Harvested Area				Production				Year-to-Year (% change) (metric)		Distribution of Production (% - metric)

SOURCE: Statistics Canada, Manitoba Agriculture and Food

SPECIALTY CROPS

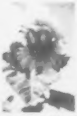
Specialty crops, excluding horticultural, forage seed and hay crops, but including all corn and sunflowers, were harvested on 321,200 hectares (794,000 acres) in Manitoba in 2001, down by one percent from 333,400 hectares (824,000 acres) harvested in 2000. The 2001 specialty crop area represents close to 8.6 percent of the total area of field crops harvested, excluding hay. In general, the weather in 2001 was less favourable than in 2000 for the production of most specialty crops. As a result, crop yields were down for dry peas, canary seed, fababeans, mustard and sunflowers.

Specialty crops grown in Manitoba include those shown in the summary Table 4 and in the historical tables. In addition, there are a number of other specialty crops grown on a limited basis such as horseradish (for enzyme extraction) and borage (for oil). Manitoba also produces such crops as wild rice, and a number of spice or essential oil crops like dill, and, on a limited basis, caraway, coriander, safflower and evening primrose. The investigation and adaptation of new and alternate crops and varieties through field trials are conducted on an on-going basis through the Soils and Crops Branch of Manitoba Agriculture and Food and the Manitoba Crop Diversification Centre in co-operation with producers, industry, the University of Manitoba and Agriculture and Agri-Food Canada. Crops tested or observed in recent years have included borage, chick peas, coriander, fenugreek, horseradish, Japanese millet, Jerusalem artichoke, lathyrus, lupins, oilseed radish, echinacea, ginseng, feverfew, valerian, milk thistle and quinoa, as well as a number of varieties of other major or specialty crops.

Grain Corn

Grain corn plantings in 2001 were estimated at 44,500 hectares (110,000 acres), down by 24 percent from 2000. About 40,500 hectares (100,000 acres) were harvested for grain. The estimated total production of 250,200 tonnes (9.85 million bushels) was down 5.3 percent from the 2000 level. The total value of production in 2001 was estimated at $26.8 million, a decrease of 5.3 percent from the 2000 estimate.

Sunflower Seed



The area seeded to sunflowers in 2001 was estimated at 62,700 hectares (155,000 acres). There were 56,700 hectares (140,000 acres) harvested, down by 3 percent from the harvested area in 2000. The average yield was estimated at 1,600 kilograms per hectare (1,460 pounds per acre), about 6 percent lower than in 2000. Total production of sunflower seed was 92,900 tonnes (204.7 million pounds), 8.7 percent below the 2000 level. Almost 90 percent of Canada's sunflower seed crop in 2001 was produced in Manitoba. About 90 percent of the 2001 sunflower plantings was non-oilseed or confectionary varieties. The value of sunflower seed production was estimated at $32.1 million in 2001, a 1.4 percent increase from the 2000 crop value of almost $31.7 million.

Buckwheat

Buckwheat

All 12,100 hectares (30,000 acres) of buckwheat were harvested in 2001, unchanged from 2000. The average yield was estimated at 1,000 kilograms per hectare (19.2 bushels per acre), compared to 810 kilograms per hectare (15.0 bushels per acre) in 2000. The total production was 12,500 tonnes (575,000 bushels) in 2001, 27.6 percent above the 2000 level. This represented about 75 percent of the total Canadian crop harvested. The total value of the Manitoba buckwheat crop in 2001 was estimated at $4.0 million, with the average price to the producer up by 5.2 percent from 2000.

Canary Seed

The area of canary seed harvested in 2001 was 20,200 hectares (50,000 acres), a 25 percent increase from 2000. The total production was about 11,300 tonnes (25 million pounds) in 2001, a reduction of 34.3 percent from the 2000 crop. Due to decreased production being offset by higher prices, the value of the crop to Manitoba producers increased to $7.46 million in 2001 from $4.64 million in 2000.

Dry Beans

In 2001, about 93,100 hectares (230,000 acres) of dry beans were harvested in Manitoba, about 53 percent of Canada and the largest area of any province. About 48,600 harvested hectares (120,000 acres) were white pea/navy beans, with most of the remaining area in pinto beans and smaller areas in dark red kidney, cranberry or black beans. The total farm gate value of all beans in Manitoba in 2001 was estimated to be $106.7 million, up 74.4 percent from 2000, from a production of 159,900 tonnes (352.5 million pounds).

Dry Peas

The area seeded to dry peas and harvested in 2001 was estimated at 60,700 hectares (150,000 acres), compared to a harvested area of 60,600 hectares (150,000 acres) in 2000. The average yield was estimated at 2,400 kilograms per hectare (35.8 bushels per acre), 9.4 percent below the 2000 yield. Manitoba's total production of 146,100 tonnes (5.37 million bushels) was down by 9.0 percent from the 2000 production, and represented 6-7 percent of total pea production in Canada. The value of the Manitoba crop was estimated at $26.1 million in 2001, 18.9 percent more than in 2000.

Fababeans

In 2001, about 4,000 hectares (10,000 acres) of fababeans were harvested in Manitoba, 34.4 percent less than in 2000. Prices averaged $179 per tonne (8 cents per pound). The smaller 2001 crop of 7,900 tonnes (17.5 million pounds) was worth $1.42 million.

Hemp

Industrial hemp was planted commercially in Manitoba in 1998 for the first time in nearly sixty years. In total, 606 hectares (1,497 acres) of hemp were licensed in Manitoba in 1998. The area increased to 6,500 hectares (16,000 acres) in 1999, but fell to 600 hectares (1,500 acres) in 2001, which produced about 400 tonnes (0.9 million pounds) of clean, dry oilseed. No sales of residual fibre were reported in 2001. Although some of the 2000 and 2001 oilseed crops remained unsold in 2001, the total value of hemp grain and seed production in 2001 was estimated at $0.3 million.

Lentils

The area of lentils seeded in 2001 fell by 72 percent to 4,000 hectares (10,000 acres), while the harvested area decreased to 2,400 hectares (6,000 acres). The average yield was 1,400 kilograms per hectare (1,250 pounds per acre), compared to 1,210 kilograms per hectare (1,080 pounds per acre) in 2000. As a result of the smaller crop area, total production decreased by 79 percent from 16,100 tonnes (35.5 million pounds) in 2000 to 3,400 tonnes (7.5 million pounds) in 2001. The value of Manitoba production was about $0.91 million, compared to a 2000 value of $4.99 million.

Mustard Seed

The area seeded to mustards and harvested in 2001 was estimated at 8,100 hectares (20,000 acres), and 6,100 hectares (15,000 acres) respectively. The seeded area was double the area in 2000. Most of the provincial production was yellow mustard but smaller amounts of Oriental mustard are also grown. Yields averaged 850 kilograms per hectare (750 pounds per acre). The value to Manitoba producers of the 2001 mustard crop of 5,100 tonnes (11.25 million pounds) was about $4.26 million.

Sugar Beets

No sugar beets have been produced in Manitoba since 1996 due to the closure of Rogers Sugar Ltd. processing plant in January, 1997.

Soybeans

The estimated seeded and harvested area of soybeans in 2001 increased significantly to 20,200 hectares (50,000 acres). Yields of 1,800 kilograms per hectare (27 bushels per acre) were 5.3 percent lower than in 2000. About 36,700 tonnes (1.35 million bushels) were produced with a value of $8.27 million.

Triticale

About 800 hectares (2,000 acres) of triticale were seeded and harvested in 2001, down by 60 percent from 2000. The value of triticale production of 2,200 tonnes (0.09 million bushels) was $0.26 million in 2001.

Wild Rice

The reported harvest of wild rice in Manitoba in 2001 was 500 tonnes (1,100,000 pounds), 70.5 percent more than the 2000 crop. This production is reported on a producer or green basis at 50-60 percent moisture. The value of 2001 sales was estimated at $990,000, while the 2000 crop was valued at $484,000. Processing plants in the province cure, parch and then market the wild rice at close to 8 percent moisture level. Wild rice from Manitoba is all natural lake or river-grown with no paddy rice farms. There are two major growing areas, one east of Lake Winnipeg in the Whiteshell area and one in the northwest around The Pas and Flin Flon. Total green rice reported from The Pas (northwest area) was about 318 tonnes (700,000 pounds). Harvest from the Whiteshell area was very low due to high water conditions, with only small patches of rice harvested in a few lakes. Hand picking was recommended for this area. A small number of producers in the central area were rewarded with excellent crops.

Fodder Corn

In 2001, 18,200 hectares (45,000 acres) of fodder corn were harvested, 50 percent more than the previous year's level. With yields of almost 30 tonnes per hectare (13.3 tons per acre), 544,300 tonnes (600,000 tons) of silage were produced, a 50 percent increase from 2000. Estimated at $16.39 million in 2001, the value of production rose by 85 percent from the 2000 value of $8.87 million.

Medicinal, Herb, Aromatic, Spice and Essential Oil Crops

The production of **medicinal, herb, aromatic and spice crops** is spread throughout the province with higher concentrations of growers in the Central and Southwest Regions. The rapid growth of the medicinal/aromatic market a few years ago slowed in 2000 and 2001 after markets began to adjust to demand pressures. Although prices in general remained fairly similar to 2000 levels, there was a downturn in prices for some commodities along with more demanding standards required by buyers. However, spice crops were relatively unaffected by this market adjustment. Medicinal, aromatic and herb crop prices vary according to quality, quantity, active ingredient content, perceived medicinal value, botanical authenticity, availability and extent of processing.

The area planted to **medicinal, herb and aromatic crops** of about 200-300 hectares (500-750 acres) produced an estimated 1,150 tonnes (2.5 million pounds) in 2001 with a value of about $2.5 million. **Echinacea** *angustifolia* dried root prices averaged $33/lb in 2001, but were as low as $16/lb. Seed prices averaged $650-800/lb depending on quality, organic status etc., but were as low as $400/lb. Other crops grown were feverfew, valerian and horseradish.

Spices and other specialty crops, such as coriander, caraway and safflower, occupied a total seeded area of about 3,500 hectares (8,500 acres) from which approximately 3,000 tonnes (6.6 million pounds) of crop was produced in 2001 with a value of about $1.2 million. **Coriander** and **caraway** remain the major spice crops in Manitoba with 1,700-1,800 hectares (4,225-4,500 acres). Similar to medicinal and aromatic plants, these crops are contracted with brokers and processors. Average prices in 2001 were close to 2000 levels. The average price for caraway in 2001 was $0.32/lb, coriander was $0.21/lb and fenugreek was $0.22/lb. Dill (seed) was priced at $0.24/lb. **Safflowerseed** is grown for birdseed or for its high-quality edible oil. The area of safflowerseed planted and harvested in 2001 was estimated at 1,600 hectares (4,000 acres) with production reportedly spread widely across the province, compared to little or none seeded two years earlier. With an average yield of 1,500 kilograms per hectare (1,300 pounds per acre), about 2,400 tonnes (5.2 million pounds) were produced. With prices reported averaged $330 per tonne ($0.15 per pound), the total value of the crop is estimated at $0.78 million, slightly below the 2000 level.

The area planted to **borage**, declined to almost zero in 2001 as no contracts were offered.

STRAW FOR PROCESSING

Flax

In 2001, 90,000 tonnes (100,000 tons) of flax straw were purchased for an average price of $5.50/tonne ($5.00/ton). The total value of the straw in 2001 was $0.5 million.

Wheat

About 180,000 tonnes (200,000 tons) of wheat straw were baled in 2001 and sold for $8.00/tonne ($7.25/ton) for processing into straw board. The approximate value of straw sold in 2001 was $1.45 million.

TAME HAY AND PASTURE

In 2001, the area harvested for tame hay (dry hay and silage) was at 896,400 hectares (2,215,000 acres), up by 12.4 percent from the 2000 estimate. Hay production increased by about 15 percent to 3.1 million tonnes (3.45 million tons) in 2001. The estimated value of the 2001 crop was $187.8 million, up by 25.5 percent from the 2000 level of $149.7 million.

While the production of wild hay and other crops (wheat, millet) cut for hay is unknown, the area of improved pasture was about 380,000 hectares (950,000 acres) in 2001.

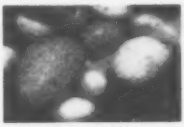
POTATOES



Spring conditions provided a challenge for planting in 2001. As a result, the planting season was spread out over a six-week period. Unlike 2000, where the bulk of the planting was completed by May 10, most growers completed planting by late May. Later planted fields had difficulty in reaching their yield potential. An extended period of very hot and dry weather added stress to the potato plants, which also played a role in reducing overall average yields to just below average.

The majority of the potato crop was harvested prior to the occurrence of any yield-robbing frosts. The late blight forecasting network consisted of 49 weather stations located throughout all potato growing areas of the province. Late blight was first identified during the third week of July from the southwest region. Late blight was found in most areas by the end of the summer, but overall disease levels were low compared to the 1999 and 2000 season. Drier conditions at harvest reduced the risk of tuber diseases and rot during storage.

2001 was an interesting year for insects in Manitoba potatoes. Aphid numbers were down from previous years and potato flea beetles were present in small numbers. Colorado potato beetles presented an ever-increasing challenge, as resistance became more widespread. Variegated cutworm was a late season surprise causing some serious defoliation in the southern part of the province. Approximately 3,000 acres (1,210 hectares), mostly for processing, were lost due to excessive moisture conditions. As a result, about 75,500 acres (30,500 hectares) were harvested. The planted area in 2001 was comparable to 2000. The table industry saw a significant increase in revenues, due to high prices resulting from the drought in Eastern Canada and a tight supply in the United States. The overall farm-gate value of the potato crop is estimated to be just over $129 million.

Estimated harvested area, marketed production and value in 2001 are as follows.

TABLE 33: Area, Marketings and Value of Potatoes, 2001

	Harvested Area		Marketings		Average Price		Value
	Acres	Hectares	(000 cwt)	(tonnes)	$/cwt	$/kg	($000)

TAME HAY AND PASTURE

In 2001, the area harvested for tame hay (dry hay and silage) was at 896,400 hectares (2,215,000 acres), up by 12.4 percent from the 2000 estimate. Hay production increased by about 15 percent to 3.1 million tonnes (3.45 million tons) in 2001. The estimated value of the 2001 crop was $187.8 million, up by 25.5 percent from the 2000 level of $149.7 million.

While the production of wild hay and other crops (wheat, millet) cut for hay is unknown, the area of improved pasture was about 380,000 hectares (950,000 acres) in 2001.

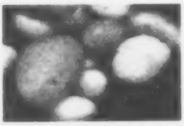
POTATOES



Spring conditions provided a challenge for planting in 2001. As a result, the planting season was spread out over a six-week period. Unlike 2000, where the bulk of the planting was completed by May 10, most growers completed planting by late May. Later planted fields had difficulty in reaching their yield potential. An extended period of very hot and dry weather added stress to the potato plants, which also played a role in reducing overall average yields to just below average.

The majority of the potato crop was harvested prior to the occurrence of any yield-robbing frosts. The late blight forecasting network consisted of 49 weather stations located throughout all potato growing areas of the province. Late blight was first identified during the third week of July from the southwest region. Late blight was found in most areas by the end of the summer, but overall disease levels were low compared to the 1999 and 2000 season. Drier conditions at harvest reduced the risk of tuber diseases and rot during storage.

2001 was an interesting year for insects in Manitoba potatoes. Aphid numbers were down from previous years and potato flea beetles were present in small numbers. Colorado potato beetles presented an ever-increasing challenge, as resistance became more widespread. Variegated cutworm was a late season surprise causing some serious defoliation in the southern part of the province. Approximately 3,000 acres (1,210 hectares), mostly for processing, were lost due to excessive moisture conditions. As a result, about 75,500 acres (30,500 hectares) were harvested. The planted area in 2001 was comparable to 2000. The table industry saw a significant increase in revenues, due to high prices resulting from the drought in Eastern Canada and a tight supply in the United States. The overall farm-gate value of the potato crop is estimated to be just over $129 million.

Estimated harvested area, marketed production and value in 2001 are as follows:

TABLE 33: Area, Marketings and Value of Potatoes, 2001

	Harvested Area		Marketings		Average Price		Value
	Acres	Hectares	(000 cwt)	(tonnes)	$/cwt	$/kg	($000)
Processing	59,390	24,035	12,831	582,000	7.58	0.167	97,293
Seed*	9,324	3,773	945	42,865	11.88	0.262	11,227
Fresh Market	6,818	2,760	1,108	50,258	18.55	0.409	20,554
TOTAL	**75,532**	**30,568**	**14,884**	**675,123**	**8.67**	**0.191**	**129,074**

* Approximately half of the acres were either retained for recertification or sold for processing (included in Processing Marketings).

VEGETABLES

Wet and cool conditions in the spring of 2001 resulted in planting delays and slow crop growth. The hot, dry summer months along with irrigation allowed crops to catch up with little or no loss of markets. The extended fall harvest conditions were excellent with no delays and good quality of root crops going into storage. The long, dry fall conditions resulted in virtually no summer crops being left in the field and allowed fall field work to be completed without difficulty. Generally, yields were average to good with quality rated as fair to good.

Summer crop market demand was generally good with a slow down in all crops markets for a short period after the September 11/01 terrorist attack in New York. Good fall weather conditions nationwide were allowing Manitoba's major competitors in Alberta and Ontario to continue harvest into the first and third weeks of December, respectively. This created pricing and demand problems for Manitoba growers throughout this period and into the New Year. In particular, storage onion prices were severely depressed throughout the storage season. Overall the crop year could be rated as fair to average.

The total area of vegetables harvested increased by 5 percent to 1,877 hectares (4,637 acres) in 2001. The value of vegetables marketed rose by 30 percent to $21.6 million in 2001.

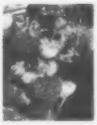
ORNAMENTAL CROPS & FRUIT

Winterkill for 2000/2001 was minimal for the strawberry crop, however some frost damage was reported in the spring of 2001. Certain areas of the province received high amounts of rainfall that flooded some fields. Other areas of the province did experience some drought conditions.



The acreage of strawberries, saskatoons and rasoberries remained stable for the 2001 season. Prices for strawberries ranged from $5.00-8.00/pail ($1.00-1.60/lb) for U-pick. The pre-picked strawberries were at $8.00-11.00/pail ($1.60-2.20/lb). Raspberry prices were very similar to strawberry prices. Prices for saskatoon U-pick were on average $2.00/lb and the pre-pick were $3.00-3.25/lb.

Greenhouse Production

According to the 2001 Census of Agriculture, the total production area of 235 greenhouses in Manitoba (including small on-farm operations) was 235,412 m^2 (2.53 million square feet). Almost 85.6 percent of the area in use in 2001 was for flowers, 6.7 percent for vegetables and 7.7 percent for other products.

The 2001 greenhouse season started out with a cool, relatively wet spring, which affected bedding plant sales. When the weather improved, sales returned to more normal levels. Winter snow load damage was experienced, but growers simply reconstructed in early spring to maintain production capacity. Generally, greenhouse operations opened for business on time with a few operations opening earlier to capture the early market. There was a decrease in bedding plant sales over the previous year mainly due to the spring conditions, which affected home gardeners' planting intentions.

The positive effect of the mild winter season was offset by an increase in operating expenses, particularly for heating fuels, which are a major component (about 30-40 percent) of greenhouse expenses. The extraordinary increase in natural gas prices in 2001, which in some cases was three times the previous rate, caused many greenhouses either to delay seeding to reduce fuel costs or to shut down completely. Although most operations tried to increase their prices by 20-40 percent (extreme) to compensate for higher costs, not all cost increases realistically could be passed on to the consumer. It is likely that many greenhouse operations will increase plant prices again in 2002/03 to recoup some of their extra expenses.

During the past three years, there has been a decline in the number of greenhouses operating in Manitoba. Some operations are dealing with rising costs by not remaining open as long as in the past. These operations open early to catch the first rush of sales then close early in June or even late May. A number of growers have also reduced or limited their selection of plants to reduce overhead costs. Overall, there has been an adjustment to rising costs that has had a detrimental effect on the greenhouse industry in Manitoba.

For the 125 greenhouses surveyed in 2001 covering an area of 206,059 m^2 (2.22 million square feet), total sales amounted to $25.5 million, up by 6 percent from 2000. The total number of ornamental bedding plants reported sold in 2001 was 31.1 million, a decrease of 15.4 percent from 2000. However, more potted plants were sold in 2001 than in 2000. Vegetable bedding plant sales totalled 2.6 million plants, a decline of 30.9 percent from 2000 sales. Flower and ornamental plant sales direct to the public totalled $13.2 million, while sales through chain stores, other retail outlets, wholesalers, government, other greenhouses and other channels, were estimated at $7.3 million, $2.7 million, $0.4 million, $0.2 million, $1.0 million and $0.3 million respectively. 2001 greenhouse vegetable sales were about $0.33 million, down from $0.47 million in 2000. Imports of nursery plants, bulbs and cut flowers increased to $19.3 million in 2001 and there were $1.2 million of assorted plants exported during the year. The Manitoba greenhouse industry employed 960 people in 2001 with wages totaling $7.5 million.

Mushrooms

The 2001 Census of Agriculture reported 8 mushroom growers with a total production area of 30,240 m^2 (325,500 sq ft). Manitoba mushroom sales were estimated at 3.1 million kilograms (6.9 million pounds) in 2001, an average of about 60,000 kilograms (132,000 pounds) per week. This compares to a sales estimate of 3.7 million kilograms (8.1 million pounds) in 2000. The average wholesale price of mushrooms was close to $3.46/kg ($1.57/lb) in 2001 resulting in total sales of approximately $10.8 million.

Nursery Sod

The sod area under cultivation for sale by 9 growers in 2001 was 946 hectares (2,338 acres). The value of sales in 2001 was estimated at $7.8 million.

Nursery Products

Winterkill during 2000-2001 was not significant, but wet, cool conditions in early spring resulted in slower sales. Sales increased when the weather improved, assisted by increased new-home/landscaping activity. On average, prices of nursery stock in 2001 were steady to higher than 2000 levels.

According to the 2001 Census of Agriculture the total area of outdoor plantings for 165 nurseries was 1,014 hectares (2,505 acres) in 2001. Direct sales to the public were valued at $3.6 million in 2001, sales to landscape contractors increased to $1.6 million, sales to garden centres and other growers fell significantly to $2.4 million and $1.0 million respectively in 2001, while sales to public agencies, other channels and for export remained fairly steady at $0.5 million, $0.6 million and $0.5 million respectively. The gross value of 2001 sales was $10.2 million, while the net value (less resales) amounted to $7.2 million.

FOREST PRODUCTS

The 2001 Census of Agriculture reported that 309 farms sold forest products valued at $2.0 million in 2000. This was based on total commercial sales and included plywood and fence posts. In 2001, farm cash receipts from forest products were estimated at $1.3 million, similar to the 2000 estimate.

Christmas Trees

The 2001 Census of Agriculture reported 112 farms with a total 512 hectares (1,266 acres) of Christmas trees. This was a decrease of 28 farms and 358 hectares (884 acres) from 1996. The value of Christmas tree sales in 2001 was estimated at $98,000, up from $90,000 in 2000.

SEED PRODUCTION

Forage Seeds

Marketings of all forage seed crops, including foreign and private varieties, decreased to 13.6 million kilograms (30 million pounds) in 2001 from the revised sales of 16.6 million kilograms (36.6 million pounds) in 2000. The total farm gate value decreased by 30 percent from $19.2 million to $13.5 million.

The following table shows planted area, marketings and average farm gate price for a combination of certified and common seed.

LIVESTOCK PRODUCTION

CATTLE

Production

The estimated production value of Manitoba cattle increased by $77 million, from $489 million in 2000 to $566 million in 2001. The estimated average value per animal increased to $1,040, while production (slaughter in Manitoba, net marketings out of province, inventory change and on-farm slaughter) rose from 520,000 head in 2000 to 545,000 head in 2001. Higher prices for finished and backgrounded cattle in 2001 led to more animals being sold to out-of-province buyers earlier in the year. According to Statistics Canada, the cattle inventory increased by 40,000 head in 2001.

Total Marketings

Including estimated sales to Alberta and Saskatchewan, net commercial marketings of Manitoba-origin cattle and calves rose by 30,000 head from 475,000 head in 2000 to about 505,000 head in 2001. Marketings of local slaughter cattle to Manitoba packers decreased by 1,385 to 15,865 head whereas marketings of slaughter calves rose by 17 to 83 head. Shipments of Manitoba-origin feeder cattle and calves to the U.S. and Eastern Canada exceeded 73,500 head, up from a year earlier. Net export sales of Manitoba slaughter cattle and calves to Ontario, Saskatchewan, Alberta and the U.S., increased from 178,000 in 2000 to 220,000 in 2001. Estimated net marketings of Manitoba feeder cattle and calves to Alberta and Saskatchewan in 2001 were about 195,000 head, 25,000 below the 2000 level.

Slaughter Cattle

There were over 46,000 Manitoba-produced cattle and calves slaughtered in Canada, with 15,950 killed in Manitoba, 9,425 head in 25 provincially-inspected plants and almost 6,525 head in two small federally-inspected plants. Almost 190,000 slaughter cattle and calves were exported to the United States.

Replacement Cattle Marketings

In 2001, almost 418,100 feeder cattle marketings were recorded by Manitoba auction markets. This was a decrease of 4 percent from the previous year. Over 360,700 feeder cattle and calves were sold through Manitoba's seven major auction markets, while 57,400 replacement cattle were marketed through the seven smaller markets in the province. Over 60,700 feeder cattle and calves were shipped to eastern markets in 2001, an increase of 9.4 percent from 2000, while 64,500 Saskatchewan feeder cattle and calves were shipped into/through Manitoba. Manitoba exported 12,800 feeders to the United States in 2001, of which most were Manitoba-origin, up from 5,000 in 2000. It is believed that of 260,000 feeder cattle and calves purchased in Manitoba by Alberta and Saskatchewan buyers in 2001, most were Manitoba-produced. This number compares to an estimate of 270,000 Manitoba feeder cattle and calves moving west from Manitoba in 2000.

Prices

The simple average price for grade A steers in 2001, at $103.45/cwt, increased by 8.6 percent from $95.28/cwt in 2000, while that of D1,2 cows was up by 7.9 percent to $66.43/cwt. The simple average price for feeder calves, 200-250 kilograms (501-600 pounds) was $154.23/cwt. This compares with the simple average price in 2000 of $147.74/cwt. The simple average price for feeder steers 350-400 kilograms (801-900 pounds) in 2001 was $125.07/cwt, a rise of 5.2 percent from 2000, the sixth year of higher prices.

Prices

The simple average price for grade A steers in 2001, at $103.45/cwt, increased by 8.6 percent from $95.28/cwt in 2000, while that of D1.2 cows was up by 7.9 percent to $66.43/cwt. The simple average price for feeder calves, 200-250 kilograms (501-600 pounds) was $154.23/cwt. This compares with the simple average price in 2000 of $147.74/cwt. The simple average price for feeder steers 350-400 kilograms (801-900 pounds) in 2001 was $125.07/cwt, a rise of 5.2 percent from 2000, the sixth year of higher prices.

Inventory

According to Statistics Canada's Census of Agriculture, there were 1,424,427 head of cattle and calves on 11,333 Manitoba farms on May 15, 2001. The number of beef cows was 563,300 head, while beef heifers for slaughter and replacement were 63,273 and 85,407 head respectively in 2001. Steers and calves were at 101,194 head and 521,598 head respectively.

HOGS

Production

In 2001, Manitoba farmers produced close to 6.35 million hogs, an increase of 14.6 percent from 2000. A 3.4 percent rise in average slaughter hog prices together with an 11.1 percent increase in export weanling prices led to a rise of 4.7 percent in the average value per head to $135 in 2001. Increased hog production and prices in 2001 resulted in a $145 million increase in the total value of hog production to $860 million.

Total Marketings

Manitoba producers marketed over 3.4 million hogs for slaughter by Canadian plants in 2001, 452,000 more than in 2000. Almost all of these Manitoba slaughter hogs were killed in the province. Slaughter hog marketings in Manitoba in 2001 were above corresponding levels in 2000 as processor expansion led to additional hog slaughter. According to Statistics Canada, 1.72 million weanlings, 0.89 million slaughter hogs and 18,640 breeding gilts were exported to the United States and Mexico in 2001, an increase of 12.2 percent from total hog and weanling exports in 2000.

Slaughter

Manitoba packers slaughtered 4.15 million hogs in 2001, an increase of 5.7 percent from 2000. More than 4.02 million hogs were killed in federally-inspected plants, while 121,780 hogs were slaughtered in provincially-inspected establishments. Of the total hogs killed in Manitoba plants, about 0.8 million head came from Alberta, Saskatchewan, Quebec and Ontario. The average hog carcass weight in 2001 was 91 kilograms (200 pounds), up by 1.6 percent from 2000.

Prices

Improved domestic and export demand for pork resulted in higher North American hog prices in the first half of 2001. The highest monthly average price received for Index 100 hogs (including all premiums and bonuses) in Manitoba was $199/100 kg ($90.30 per hundredweight) in June, but prices dropped seasonally to $137/100 kg ($62.20 per hundredweight) in December. The average annual price of Index 100 hogs (including all premiums and bonuses) in 2001 was $172/100 kg ($78.20 per hundredweight), up by 3.4 percent from 2000 and 10.9 percent above the five-year average (1996-2000) of over $155/100 kg ($70.50 per hundredweight).

Inventory

According to Statistics Canada's Census of Agriculture, there were 1,424,427 head of cattle and calves on 11,333 Manitoba farms on May 15, 2001. The number of beef cows was 563,300 head, while beef heifers for slaughter and replacement were 63,273 and 85,407 head respectively in 2001. Steers and calves were at 101,194 head and 521,598 head respectively.

HOGS

Production

In 2001, Manitoba farmers produced close to 6.35 million hogs, an increase of 14.6 percent from 2000. A 3.4 percent rise in average slaughter hog prices together with an 11.1 percent increase in export weanling prices led to a rise of 4.7 percent in the average value per head to $135 in 2001. Increased hog production and prices in 2001 resulted in a $145 million increase in the total value of hog production to $860 million.

Total Marketings

Manitoba producers marketed over 3.4 million hogs for slaughter by Canadian plants in 2001, 452,000 more than in 2000. Almost all of these Manitoba slaughter hogs were killed in the province. Slaughter hog marketings in Manitoba in 2001 were above corresponding levels in 2000 as processor expansion led to additional hog slaughter. According to Statistics Canada, 1.72 million weanlings, 0.89 million slaughter hogs and 18,640 breeding gilts were exported to the United States and Mexico in 2001, an increase of 12.2 percent from total hog and weanling exports in 2000.

SOURCE: Agriculture and Agri-Food Canada, Manitoba Health, CFIA.

Slaughter

Manitoba packers slaughtered 4.15 million hogs in 2001, an increase of 5.7 percent from 2000. More than 4.02 million hogs were killed in federally-inspected plants, while 121,780 hogs were slaughtered in provincially-inspected establishments. Of the total hogs killed in Manitoba plants, about 0.8 million head came from Alberta, Saskatchewan, Quebec and Ontario. The average hog carcass weight in 2001 was 91 kilograms (200 pounds), up by 1.6 percent from 2000.

Prices

Improved domestic and export demand for pork resulted in higher North American hog prices in the first half of 2001. The highest monthly average price received for Index 100 hogs (including all premiums and bonuses) in Manitoba was $199/100 kg ($90.30 per hundredweight) in June, but prices dropped seasonally to $137/100 kg ($62.20 per hundredweight) in December. The average annual price of Index 100 hogs (including all premiums and bonuses) in 2001 was $172/100 kg ($78.20 per hundredweight), up by 3.4 percent from 2000 and 10.9 percent above the five-year average (1996-2000) of over $155/100 kg ($70.50 per hundredweight).

SHEEP AND LAMBS

Inventory

According to the 2001 Census of Agriculture, the total number of sheep and lambs on 733 Manitoba farms on May 15, 2001 was 84,798 head, of which 38,212 were ewes, 1,705 were rams and 44,881 were lambs. Due partly to the decrease in animals in feedlots, the sheep and lamb inventory on January 1, 2002 was estimated at 76,200 head.

Slaughter and Exports

Supply/disposition balance sheet estimates indicate that live imports of sheep and lambs into Manitoba were about 53,000 head in 2001, while sales of sheep and lambs (including breeding stock) to other provinces were close to 58,000 head. There were 2,387 sheep and lambs slaughtered in provincially-inspected packing plants in Manitoba in 2001 compared with 2,187 in 2000. Over 28,850 sheep and lambs were exported to the U.S. from Manitoba in 2001 up by 5.9 percent from the 2000 level. Sales of 59,000 Manitoba-produced lambs were valued at about $5.2 million in 2001, up from $4.7 million in 2000.

Prices

In 2001, the average price for A and B lambs, 43-49 kilograms (95-109 pounds), was $2.14 per kilogram ($97 per hundredweight), a decrease of 6.7 percent from a year earlier, but up by 5.4 percent from 1998 and 1999 levels. Sheep prices averaged $0.95 per kilogram ($43 per hundredweight) for 2001, down by 15.7 percent from 2000.

Wool Production

The total farm value of shorn wool sold or used on farms in 2001 was estimated at $34,000, down by 61 percent from the 2000 value of $88,000. The average price received by producers for wool actually sold or used on farms decreased from 56 cents per kilogram (25 cents per pound) in 2000 to 50 cents per kilogram (23 cents per pound) in 2001. Total production including wool used on farms, but excluding wool destroyed or stored, was estimated at 67,000 kilograms (147,700 pounds) in 2001, down from Statistics Canada's estimate of 157,700 kilograms in 2000.

DAIRY

Milk Cows

According to Statistics Canada there were 42,407 milk cows on 853 Manitoba farms on May 15, 2001. Dairy replacement heifers older than one year on farms were estimated at 20,203 head. The actual number of dairy cows producing milk within the supply management (quota) system fell by 1.4 percent from 35,000 head on December 31, 2000 to 34,500 head on December 31, 2001.

Total Milk Supply

Total milk and cream production in the 2002 dairy year (August 1, 2001 to July 31, 2002) was 285.1 million litres for milk sold within the supply management (quota) system down by 1.5 percent from the 2000-2001 level of 289.5 million litres. Milk production was 293.6 million litres in 1999-2000. The 2001 producer price for class 1 milk was $64.62 per hectolitre, up by $2.85 per hectolitre from the price received in 2000. Farm sales of milk and farm-separated cream in calendar-year 2001 amounted to 289.5 million litres, a decrease of 1.8 percent from 2000. Cash receipts for all milk sold off the farm totalled $158.0 million, up by 2.6 percent from the 2000 value of $154.0 million. Supplementary payments of almost $1.3 million were down by 40.9 percent from the 2000 level of over $2.2 million. The volume of milk sold for fluid purposes was 112.1 million litres in 2001, a decrease of 0.3 percent from 2000. This represented 38.7 percent of all sales in 2001. By comparison, the volume of milk and cream sold off the farm for industrial use amounted to 177.5 million litres in 2001, representing 61.3 percent of total sales compared to the 2000 figure of 61.9 percent.

Milk & Cream Sales by Dairies

Of the 97.9 million litres of fluid milk sold by Manitoba dairies in 2001, 12.5 percent was standard (homo) milk, 43.5 percent was 2%, 29.7 percent was 1% and 14.4 percent was skim milk. Over 2.1 million litres of cereal and whipping cream were sold in 2001.

SHEEP AND LAMBS

Inventory

According to the 2001 Census of Agriculture, the total number of sheep and lambs on 733 Manitoba farms on May 15, 2001 was 84,798 head, of which 38,212 were ewes, 1,705 were rams and 44,881 were lambs. Due partly to the decrease in animals in feedlots, the sheep and lamb inventory on January 1, 2002 was estimated at 76,200 head.

Slaughter and Exports

Supply/disposition balance sheet estimates indicate that live imports of sheep and lambs into Manitoba were about 53,000 head in 2001, while sales of sheep and lambs (including breeding stock) to other provinces were close to 58,000 head. There were 2,387 sheep and lambs slaughtered in provincially-inspected packing plants in Manitoba in 2001 compared with 2,187 in 2000. Over 28,850 sheep and lambs were exported to the U.S. from Manitoba in 2001 up by 5.9 percent from the 2000 level. Sales of 59,000 Manitoba-produced lambs were valued at about $5.2 million in 2001, up from $4.7 million in 2000.

POULTRY

Production

The production value of poultry meat and eggs increased by 6.8 percent to an estimated $172.3 million in 2001. About 3 million layers produced an average of 28,000 eggs per 100 birds in 2001. The number of eggs sold for the regular commercial markets was down by one percent, but there were an additional 17 million dozen eggs produced under Special Market Development quota and Eggs for Processing quota. The value of eggs for consumption increased by 1.0 percent to $73.6 million mainly due to the higher prices for table eggs in 2001. The value of chicken and turkey hatching eggs rose by 19.3 percent due mainly to more eggs and higher prices for turkey hatching eggs. The value of chicken meat rose by 14.8 percent to $64.3 million due to an increase in marketings of heavier broilers (1.2-2.6 kg live). The value of turkey meat declined by 6.1 percent, to $17.1 million in 2001 due to fewer marketings of broilers and hens.

Inventory

The 2001 Census of Agriculture indicated 1,628 producers had 7.9 million hens and chickens on farms on May 15, 2001, 198 farms had 694,200 turkeys and 172 farms had 11,740 ducks, while 138 farms had 59,620 geese. Manitoba poultry farms, including 174 registered egg production operations and 124 registered broiler chicken farms, had 3.0 million hens and 4.0 million broiler chickens on farms respectively at May 15, 2001.

POULTRY

Production

The production value of poultry meat and eggs increased by 6.8 percent to an estimated $172.3 million in 2001. About 3 million layers produced an average of 28,000 eggs per 100 birds in 2001. The number of eggs sold for the regular commercial markets was down by one percent, but there were an additional 17 million dozen eggs produced under Special Market Development quota and Eggs for Processing quota. The value of eggs for consumption increased by 1.0 percent to $73.6 million mainly due to the higher prices for table eggs in 2001. The value of chicken and turkey hatching eggs rose by 19.3 percent due mainly to more eggs and higher prices for turkey hatching eggs. The value of chicken meat rose by 14.8 percent to $64.3 million due to an increase in marketings of heavier broilers (1.2-2.6 kg live). The value of turkey meat declined by 6.1 percent, to $17.1 million in 2001 due to fewer marketings of broilers and hens.

TABLE 55: Summary of Poultry Production, 2000, 2001

EGGS	2000^R			2001^P

OTHER LIVESTOCK

The number of Manitoba farmers diversifying into non-traditional livestock operations has been increasing since the 1980s.

Bison

According to the 2001 Census of Agriculture, there were 157 bison producers in Manitoba, of which most were commercial producers with a few hobbyists. This number was lower than industry estimates of 180 bison farms in 2001. The provincial bison herd totalled 13,400 animals in mid-2001, including 8,900 breeding animals. The breeding herd has been increasing at about 20 percent per year for the past three years. About 2,500 feeder bulls were fed on a grain/roughage ration, of which 1,278 head were sold for slaughter in 2001. Of these, 1,088 finished bulls went to the North American Bison Co-operative plant at prices averaging US$2.23/lb (carcass weight). There were 190 bison killed in Manitoba plants in 2001 and approximately 350 killed on farms for meat. About 100 bison were brought into the province during the year, while 200 breeding animals were shipped to other provinces. It is estimated that about 7,000 calves were produced in the province in 2001. The demand for breeding stock decreased in 2001 with most of the female calves produced being retained for breeding. Bred cow prices fell to close to $2,000 in 2001, while female calf prices declined to $900 per head. Bull calves and 2-year old bulls for breeding were valued at about $500 and $3,000 per head respectively. The value of bison production in Manitoba was estimated at about $6 million in 2001, down from $14 million in 2000.

Deer & Elk

Manitoba producers had approximately 3,125 elk on 87 farms and 962 deer on 16 farms in 2001. This included 800 fallow deer, 100 white-tailed deer and 60 other deer. Elk numbers increased by 25 percent from 2000, while deer numbers rose by 28 percent. There were 232 deer and 131 elk slaughtered in inspected facilities in the province and no deer exported to the United States in 2001. The value of elk and deer production was estimated at about $0.9 million in 2001, down from $1.3 million in 2000.

Goats

There were 12,637 goats on 507 farms in 2001 according to the 2001 Census of Agriculture. One large commercial dairy goat producer with over 300 goats and 25 smaller producers with a total of 130-140 dairy goats produced 210 klitres of goat milk in 2001, most of which was sold as fluid milk with smaller amounts used for cheese production.

There were 302 meat goats killed in Manitoba plants in 2001, about 9,000 goats were shipped to Ontario and Quebec for breeding stock and slaughter and 53 breeding goats valued at $61,640 were exported to the United States, Trinidad and Tobago. An estimated 7,000 goats were killed on Manitoba farms for or by customers. Goat meat and milk sales were valued at about $1.3 million in 2001.

Horses

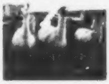
The 2001 Census of Agriculture indicated 3,730 farms reported 62,791 horses and ponies. This figure represents a decrease of 9 percent over the 1996 Census figure of 68,783 head. During the 2000/2001 season, 252 farms supplied pregnant mares' urine from 18,267 production mares for a gross value of $46,444,863. Improved demand resulted in an increase to 21,100 production mares on 248 farms and an estimated gross value of $52,061,491 in 2001/2002.

The PMU industry in Manitoba also produced about 18,000 foals in 2001, some of which were used for replacement mares or marketed as breeding stock, some sold as pleasure animals or ranch stock with the remainder sold to feedlots or exported.

In 2001, the province exported 4,411 horses of all types worth $4.7 million to the U.S., almost 1,400 to Ontario and about 9,000 to Alberta. It is estimated that about 30-40 percent of foals end up in feedlots. Only 9 horses were processed in Manitoba plants. The value of horse sales in 2001 was estimated at $16 million.

Llamas and Alpacas

According to the 2001 Census of Agriculture, there were 511 llamas and alpacas on 106 farms kept for breeding purposes, fibre production or as pets. This was an increase of 57 farms and 315 llamas and alpacas since 1996. In 2001, Canadian National Livestock Records listed 59 registered llamas and alpacas in Manitoba. Llamas generally are raised and sold as breeding stock, pets and as guard animals for sheep, but can be used for trekking/packing and in 4-H events. Llamas produce fibre which is made into yarn. A large herd consisted of about 30 llamas whereas smaller herds had one-four animals, usually found on petting farms or as pets. Breeding animals sold for $500-2,000 each.



The registered alpacas are the Huacaya variety. The industry is comprised mainly of animals kept or sold for pets, breeding and fibre. Alpaca fibre is valuable and in demand. Male alpacas were sold for $1,000-10,000, with some sales as high as $40,000. Female breeding stock sold for $5,000-15,000 each with some animals valued up to $20,000.

Rovings, a small mill near Dugald, processes wool, fibre and hair, on a custom or commercial basis. Rovings imports raw material from all over North America and exports yarn and finished products throughout North America. The price of top quality alpaca fibre is about $80-128/lb or $176-282/kg, while top quality llama fibre is about $50/lb or $110/kg. Fibre from one alpaca is worth $600-900. The value of llama and alpaca production was estimated at $0.7 million in 2001.

Ostriches

According to the 2001 Census, there were 15 producers with 295 ostriches in the province, of which about 50-100 were breeding pairs. Most of the chicks produced are being sold for slaughter. In 2001, 48 ostriches with an average carcass weight of 61 kilograms (135 pounds), valued at $350-550 per bird, were slaughtered in Manitoba plants. Ostrich meat sold for $4-6/lb. The average price of breeding stock was $1,000/bird for yearlings and $1,000+/bird for proven breeding pairs in 2001. The price of 3-month feeder chicks was $120 each, fertilized eggs were in the $20-30 range, while prices for unfertilized eggs for the novelty industry were about $15-20 each. Green hides were worth $100-150 each. Manitoba ostriches and ostrich meat are sold across Canada. In 2001, ostrich meat, leather and products were exported to the United States, Mexico, South America and Asia. The value of ostrich production in 2001 was over $0.5 million.

Emus

The 2001 Census showed 31 producers with 658 emus on Manitoba farms, down from 3,200 birds in 1996. Sales have shifted from predominately breeding stock to commercial sales for meat. There were 12 emus slaughtered in provincial plants during the year. Week-old birds were worth about $150 in 2001, two-year old birds, $1,000/pair and proven breeders, $2,000/pair. Emu meat was sold for $5-10/lb, while emu oil was valued at $10+/oz in 2001. Craft items are also produced from emu feathers, leather and egg shells. The value of emu sales was estimated at about $0.2 million in 2001.

Pheasants

There were 16 pheasant producers in Manitoba with 30,465 pheasants according to the 2001 Census of Agriculture. This was a decrease of 24 percent from 2000. In 2001, about 16,600 birds were exported to the U.S. and 14,300 chicks were imported. There was one major producer who imported day old chicks from the U.S. and raised the birds for meat, sport and show purposes. No pheasants were slaughtered in the province in 2001. Pheasant meat was exported to the U.S. and Japan via a plant in Ontario. Birds are valued at $8-10/bird. Total sales of pheasants were valued at less than $0.3 million in 2001.

Rabbits

The 2001 Census of Agriculture reported a total of 99 rabbit farms with a rabbit population of 11,902. Manitoba produced 40,000-50,000 slaughter rabbits in 2001. The majority of rabbits were sold to the U.S. primarily for medical and industrial purposes, then for meat. In 2001, the average U.S. price was US$0.90/lb and rabbits weighed an average of 5-7 pounds. Canadian prices were approximately $1.20/lb. About 717 rabbits were killed in inspected facilities in the province, while the balance were slaughtered on farms or sold to other provinces. Rabbit sales were valued at about $0.4 million in 2001.

Wild Boars

According to the 2001 Census of Agriculture, Manitoba had 56 wild boar producers with 3,285 animals in 2001, down from 7,560 head five years earlier. There were approximately 2,000-3,000 animals produced in Manitoba in 2001. Wild boar are used for meat and, to a lesser extent, hunting. There were 351 boars killed in Manitoba packing plants during the year. About 170 wild boars were shipped to the United States and 176 to eastern Canada in 2001. The value of wild boar sales for slaughter, breeding and hunting was estimated at $1.2 million in 2001.

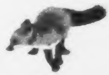
OTHER PRODUCTS

FURS: FARM-RAISED AND WILDLIFE



The 2001 Census of Agriculture showed 9 farms with 270 foxes, 17 farms with 50,130 mink and 22 farms with 5,840 chinchillas. Pelts were obtained from both fur farms and wildlife sources. In 2001, 35,650 pelts were produced, 150 fox pelts produced on 6 fox farms and 35,500 mink pelts produced on 12 mink farms, with total mink pelt sales of $1,628,851 and total fox pelt sales of $7,452. In 2000, 10 mink farms produced 35,500 mink pelts valued at $1,615,927, while 180 fox pelts valued at $8,782 were produced by 6 farms.

Wildlife pelts totalled 102,003 in 2000/2001, an increase of 5.1 percent from 1999/2000 and about one-quarter of the number in the peak-value year, 1986/87. The rise in pelt sales and higher average prices for fur raised the 2000/2001 market value to $2,769,982, 40.8 percent above the previous year's level.

The total number of farm and wildlife pelts in 2000 was up by 9.7 percent from 1999 with the overall fur value showing an increase of 38.2 percent.

HONEY AND ALFALFA LEAFCUTTING BEES

Honey Bees

Despite higher than normal losses and/or weak colonies coming out of winter, Manitoba's honey crop was considered average to above average. Many producers reported very poor honey production at the start of the honey flow in June and July, but production improved dramatically in August and September. Unfavourable weather conditions, (i.e. hot and humid) during the canola flowering season was considered to be the primary reason for the slow production. Varroa and Honey Bee Tracheal Mite (HBTM) continues to spread. In addition to finding new beekeeping operations with Varroa and HBTM, there are more operations with low levels of both mites.

Alfalfa Leafcutting Bees

Although the summer of 2001 initially looked like it was going to be a very good year, overall it will be considered an average production year. The high humidity during July directly affected crop pollination and bee production. Estimated bee production in 2001 was up slightly over last year and seed production was estimated to be approximately 291 kg/ha (260 lbs/ac). Low export demand for seed and bees has dramatically reduced the value of the alfalfa and leafcutting bee market.

HONEY AND ALFALFA LEAFCUTTING BEES

Honey Bees

Despite higher than normal losses and/or weak colonies coming out of winter, Manitoba's honey crop was considered average to above average. Many producers reported very poor honey production at the start of the honey flow in June and July, but production improved dramatically in August and September. Unfavourable weather conditions, (i.e. hot and humid) during the canola flowering season was considered to be the primary reason for the slow production. Varroa and Honey Bee Tracheal Mite (HBTM) continues to spread. In addition to finding new beekeeping operations with Varroa and HBTM, there are more operations with low levels of both mites.

Alfalfa Leafcutting Bees

Although the summer of 2001 initially looked like it was going to be a very good year, overall it will be considered an average production year. The high humidity during July directly affected crop pollination and bee production. Estimated bee production in 2001 was up slightly over last year and seed production was estimated to be approximately 291 kg/ha (260 lbs/ac). Low export demand for seed and bees has dramatically reduced the value of the alfalfa and leafcutting bee market.

FARM NUMBER, SIZE, TYPES

The 2001 Census, taken on May 15th, defines a census farm as a farm, ranch or other agricultural holding with sales of agricultural products.

In 2001, the total number of farms in Manitoba was 21,071, a 13.6 percent decline from 1996. Each farm averaged 361 hectares (891 acres). Almost 54 percent of Census farms reported sales over $50,000 in 2000, while 37 percent had sales over $100,000.

PEOPLE

Population

The farm population reached 79,840 or 7.2 percent of Manitoba's total population in 1996, an increase of 0.7 percent from 1991, when there were 79,280 people on Manitoba farms. Of the 24,383 farms in 1996, 15,340 or 63 percent were operated as individual or family holdings with no operating arrangement, while 8,566 or 35 percent were family partnerships or corporations. Other partnerships and non-family corporations totalled 372 or 1.5 percent. There were 105 institutions, colonies or community pastures.

There were 33,300 farm operators managing Manitoba's farms in 1996, of which 21.5 percent were female. Over 64 percent of farm operators were involved only in farming or agricultural-related occupations, while the remainder had a non-agricultural occupation.

Almost 18 percent of Manitoba farm operators were under 35 years of age in 1996, 51.2 percent were 35-54 years, while 31 percent were 55 years and over. In 1991, 32.3 percent of operators were 55 years or older, while in 1986 the percentage was 33 percent. About 83.1 percent of Manitoba farm operators were married in 1996 compared to 84.5 percent in 1991.

In 1996, the top four languages reported as mother tongue by Manitoba farm operators were English (70 percent), German (14 percent), Ukrainian (6 percent) and French (6 percent). On average, in 1996, Manitoba farmers had 11.2 years of schooling compared to farmers in 1991 who had 10.8 years of schooling. More than 34 percent of farmers had post-secondary education in 1996, up from 30 percent in 1991. In general, female farm operators had more years of post-secondary education than their male counterparts.

Hired Agricultural Labour

The 2001 Census of Agriculture reported that in 2000, 8,669 farms hired paid labour for 493,462 weeks. This included the hiring of 343,346 weeks of year-round labour by 3,864 farms and 150,166 weeks of seasonal labour by 6,106 farms. Almost 15.4 percent fewer farms hired 13.0 percent more weeks of paid labour in 2000 than five years earlier. Year-round employment increased by 18.4 percent over the five-year period, while seasonal employment increased by 2.3 percent.

FARM WAGES

In 2001, the hired farm labour index rose by 5.7 percent from 2000. Total wages and salaries paid to hired labour amounted to about $216.2 million in 2001, a 1.9 percent increase from the 2000 total wage cost of $212.2 million. The estimated average wage for hired agricultural labour in 1999 was $10.24 per hour, rising to $10.80 per hour in 2000 and $10.85 per hour in 2001.

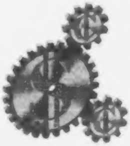
CAPITAL

Investment in Agriculture



The average investment per Manitoba farm reporting in the 2001 Census amounted to $726,346, an increase of 40.2 percent from 1996. Land and buildings accounted for 64.4 percent, machinery for 22.4 percent and livestock for 13.2 percent, respectively, of the total capital investment. According to the Census, total investment in agriculture was $15,304,836,124 in 2001, 21.1 percent above the 1996 level. The average capital investment in land and buildings was $467,878 per farm, based on the 2001 Census. This value had increased by 34.4 percent since 1996, reflecting the change to higher land values and larger farms.

Hired Agricultural Labour

The 2001 Census of Agriculture reported that in 2000, 8,669 farms hired paid labour for 493,462 weeks. This included the hiring of 343,346 weeks of year-round labour by 3,864 farms and 150,166 weeks of seasonal labour by 6,106 farms. Almost 15.4 percent fewer farms hired 13.0 percent more weeks of paid labour in 2000 than five years earlier. Year-round employment increased by 18.4 percent over the five-year period, while seasonal employment increased by 2.3 percent.

FARM WAGES

In 2001, the hired farm labour index rose by 5.7 percent from 2000. Total wages and salaries paid to hired labour amounted to about $216.2 million in 2001, a 1.9 percent increase from the 2000 total wage cost of $212.2 million. The estimated average wage for hired agricultural labour in 1999 was $10.24 per hour, rising to $10.80 per hour in 2000 and $10.85 per hour in 2001.

SOURCES AND METHODS

A large percentage of the material presented in this Yearbook for the current year is based on preliminary estimates derived from sample data. Revisions of estimates made in previous Yearbooks are included in this report. The statistics program of Manitoba Agriculture and Food, a major source of material for the Yearbook, involves close cooperation with Statistics Canada and coordination of information from many sources, including the Canadian Grain Commission, Agriculture and Agri-Food Canada, other government and private agencies and business firms dealing in farm products and supplies. Farmers contribute through livestock and crop reporting, as do staff members of Manitoba Agriculture and Food. Basic data from Statistics Canada are derived from surveys in cooperation with Manitoba Agriculture and Food. Survey samples vary from one percent to ten percent of farmers, depending on the type of information required.

Data for agricultural regions in the Yearbook can be supplemented by more detailed data for municipalities from the Census of Agriculture. The Census also provides some information on features of agriculture not covered in this Yearbook. Census division and agricultural region boundaries were changed in 1976 and Statistics Canada's estimates of crop production using the new boundaries were first made in 1977. Thus, small area estimates since 1977 are not comparable with earlier data.

Some figures may not add up due to rounding.

CROPS

Total Value of Production. This includes all crops grown on farms in the current year for sale, feed, seed and home consumption at prevailing market prices during the crop year. Disposal of these crops for various uses in the current or subsequent years may have very little effect on the total value. With few exceptions, production value of each crop represents value to the producer. Prior to 1981, the farm value for grains, oilseeds and special crops was calculated from imperial data. For 1981 and beyond, the calculation is made from metric data.

Prices. Prices used to calculate production value for most crops are those farmers receive at the shipping point. This is regarded as farm value because freight, handling and other marketing charges are deducted. Transportation costs incurred by farmers in delivering grain to elevators are included with farm expenses. Average prices for all crops are estimated final prices, based on Manitoba Agriculture and Food market outlook work. As a result, production value is more comparable with previous years, since initial payments would grossly underestimate crop value. Prices are subject to revision after all relevant sales and payments have been made. Small revisions will be necessary in current prices of crops when more information on sales and payments is available.

Areas. Most crop areas are estimated by Statistics Canada in cooperation with Manitoba Agriculture and Food. Agricultural region estimates beginning in 1994 utilize Manitoba Crop Insurance Corporation data. Minor crops, such as forage seeds and caraway are estimated through contacts with dealers, processors and Department staff and/or through administrative data. Estimates, in most cases, for harvested area and yields are based on the land harvested. Prior to 1986, the mixed grain area may have included some area cut for silage, with offsetting seeded area yield adjustments. Prior to 1991, the tame hay area may have included hay cut for silage, as well as some forage seed area.

Yields. Most crop yields are derived from Statistics Canada surveys, in cooperation with Manitoba Agriculture and Food, and from provincial crop insurance data. A number of minor crops are estimated mainly by Manitoba Agriculture and Food and revised as market data require. In some cases, yield multiplied by area may not exactly equal production, due to the rounding of one or more of the three items.

Wheat. Quality data were obtained from the Canadian Grain Commission, the Canadian Wheat Board and/or from provincial crop insurance data. Initial payments to producers were reported by the Wheat Board. Thunder Bay selling prices were recorded by the Canadian Grain Commission. Marketing data were provided by the Canadian Grain Commission and Statistics Canada. Such data were also published by Statistics Canada in the Cereals and Oilseeds Review (22-007 monthly) and the Grain Trade of Canada (22-201 annual).

Barley. Distribution by grades and initial payments have the same sources as wheat. Since private firms, in addition to the Wheat Board, sell barley, terminal elevator selling prices are Winnipeg Commodity Exchange cash quotations. Marketing data are from the same sources as wheat.

Oats, Flaxseed, Canola and Other Crops. These were treated, for the most part, similarly to the cereal grains. Regional data were not always available but verbal description was used when possible. **Sugar beets** were based on a harvested area basis. Values were at the factory level, obtained from Rogers Sugar Ltd., which ceased operation in early 1997. **Forage seed** data are from the forage specialist, Manitoba Agriculture and Food. The value of forage corn is estimated based on a dry matter value of hay and grain corn. **Wild rice** data are from the Canada Wild Rice Council.

Horticultural Crops. Included are vegetables, potatoes, fruit and ornamentals. The commercial vegetable area and prices are estimated jointly by Statistics Canada and Manitoba Agriculture and Food. The processing potato marketing data were obtained from the processors. Different levels of prices are used with respect to processing, fresh market and seed potatoes to arrive at the total value. Other horticultural values, including vegetables, fruit and ornamentals, also are derived in consultation with Peak of the Market, producers, processors, nurseries, sod farmers and the provincial horticulturists.

Pedigreed Seed. Because of its importance to Manitoba agriculture, the area seeded to this type of crop is given in detail. These figures are included in the estimates of total production of cereals, grasses and other crops. A portion of this seed is used in the province and part is exported. These are not included in the records of commercial marketings through elevators, but are considered in the total value of crop production.

LIVESTOCK

The production value of **cattle and hogs** includes commercial marketings and inventory change. A gain in numbers on farms is a part of production, but a decline during the year is a loss in production. Inventory figures are from Statistics Canada surveys. Animals in the category "local slaughterings" are those farmers kill and eat, kill and sell, or sell locally for non-plant slaughter and consumption. These animals, as well as commercial marketings, are a part of production. Inshipments are those animals brought in from other provinces, usually Saskatchewan and Alberta. To avoid double counting in the value of production, inshipments are deducted. Commercial marketings include slaughter of Manitoba-origin livestock and estimates of direct exports to other provinces, the United States and other countries. Prices of all classes of livestock marketed are taken from Canfax and Manitoba Agriculture and Food. From these figures, the average dollar value per animal is calculated and applied to animals marketed.

Slaughter and Quality. Data for cattle and hogs are obtained principally from Canadian Food Inspection Agency, Agriculture and Agri-Food Canada and Manitoba Agriculture and Food.

Sheep. Sources are the same as those for cattle and hogs. The production calculation is based on an estimate of the number of lambs produced during the year. Wool data are from Statistics Canada.

Dairy. Production figures are obtained from Statistics Canada publication 23-001 and Manitoba Milk Producers. The supplementary payments are not allocated to the different classes of milk but are added in the total value of dairy production.

Poultry. Production and marketing information is derived from Statistics Canada catalogue No. 23-202, and information provided by the various poultry producer agencies. Duck and geese marketings and prices are estimated by Manitoba Agriculture and Food based on information from processors and the number of birds on farms.

Other Livestock. Information on PMU operations are obtained from Ayerst Organics Ltd., while current data on other livestock species are derived from information provided by producer associations, Agriculture and Agri-Food Canada, Statistics Canada and Manitoba Agriculture and Food staff.

OTHER PRODUCTS

Honey, Beeswax and Bees. Production estimates are made cooperatively by Statistics Canada and Manitoba Agriculture and Food.

Fur. Data for fur farms and on wildlife pelts are obtained from Statistics Canada's publication 23-603E.

Forest. Products are those listed as sales in Statistics Canada farm income estimates.

RESOURCES

Most resource information for Census years is from Statistics Canada, Agriculture Division.

Farm Numbers. These are taken from the Census according to the current definition of a farm. In 1966 and 1971, a farm was defined as an agricultural holding of 0.40469 hectares (one acre) or more with sales during the previous twelve months of $50.00 or more. Previous definitions were less restrictive. The 1981 and 1986 Census definitions refer to agricultural holdings with sales of agricultural products during the past twelve months of $250.00 or more, while in 1991 and 1996, the Census farm is defined as an agricultural holding which produces agricultural products for sale. Farm estimates for intervening years are unofficial estimates by Manitoba Agriculture and Food.

Labour Force. Statistics are from Statistics Canada's Census of Population and Census of Agriculture. Wages came from Statistics Canada, but the survey was discontinued in 1999.

Machinery. Sales data were from the Canadian Farm and Industrial Equipment Institute, but are no longer available.

Fertilizer. Sales data are from the Western Canada Fertilizer Association and Agriculture & Agri-Food Canada.

LAND VALUES

Data are obtained from Statistics Canada.

FARM INPUT PRICE INDEX

This index comes from Statistics Canada and measures the price changes of goods and services purchased by farmers for use in agricultural production. Items included are weighted according to relative importance and grouped according to farm use.

The groups in the Farm Input Price Index consist of the following sub groups or items.

Building and Fencing. Building and fencing includes building replacement and repairs (materials and labour) and fencing construction and repairs.

Machinery and Motor Vehicles. Machinery and motor vehicles includes tractors, combines, ploughs, disc harrows, grain drills, manure spreaders, balers, automobiles and trucks, petroleum products, maintenance, licence and motor vehicle insurance.

Crop Production. Crop production includes grains, legumes and grass, seed, fertilizer, pesticides, twine and crop insurance.

Animal Production. Animal production includes feeder livestock, cattle, hogs, chicks and turkey poults, feed (prepared and grain feed), artificial insemination and veterinary services.

Supplies and Services. Supplies and services includes small tools, electricity, telephone and custom work.

Hired Labour. Hired labour includes hourly, daily and monthly rates.

FARM PRODUCT PRICE INDEX

The Farm Product Price Index (FPPI), formerly called Index Numbers of Farm Prices of Agricultural Products, gives a measure of the change over time in the prices received by farmers for agricultural commodities at the first point of sale. The Index is calculated by Statistics Canada and is based on products accounting for about 95 percent of total farm cash receipts.

The Farm Product Price Index (FPPI) was reformulated in 2000 to capture the continual shift in agriculture commodities produced and sold. It also introduces the seasonal basket concept. The new index uses 1997 as the time base (1997 = 100) and covers more agriculture commodities. This FPPI replaces the old index, which was calculated until March 1996. The index was reconstructed back to January 1992 and is linked back to 1935.

INCOME

Cash and net farm income and expense data on a provincial basis are obtained from Statistics Canada's most recent published estimates.

Calculations on a per farm basis are made by Manitoba Agriculture and Food and may not truly reflect exact averages. Census farms, as a basis, are not the only contributors to total sales. Small units, not called farms, do sell produce, but the amounts are minimal.

WEATHER DATA

These are obtained on a regular basis from the Environment Canada, Atmospheric Environment Service, Winnipeg Climate Centre, Room 1000, 266 Graham Avenue, Winnipeg, Manitoba, R3C 3V4.

Growing Degree-Days (GDD) extracted from Soil, Water & Climate, Agriculture Climate of the Eastern Canadian Prairies. HEAT: Heat Accumulations http://www.gov.mb.ca/agriculture/climate/waa01s06.html

Calculation of GDD is relatively straight forward: heat accumulated each day is determined by adding together the maximum and minimum temperatures and dividing the total by two to obtain a daily average. The base temperature specific to a given crop or insect is subtracted from this average. This value represents the daily heat useful to a crop or insect. Results greater than zero are added to determine the weekly, monthly or yearly GDD accumulated.

GDD can be used to:

- assess the suitability of a region for production of a particular crop;
- estimate the growth-stages of crops or life stages of insects;
- predict maturity and cutting dates of forage crops;
- estimate the heat stress on crops such as canola;
- help estimate the yields of cereals and canola, as well as the protein content of cereals and the oil content of canola; and
- as a planning tool for spacing planting dates to separate harvest dates in vegetable production.

METRIC CONVERSION FACTORS

1 acre = 43,560 square feet
1 hectare = 10,000 square metres (100 m X 100 m)
1 acre = 0.40469 hectares
1 hectare = 2.47105 acres
1 pound = 0.45359 kilograms
1 ounce = 28.35 grams
1 Imperial ton = 0.907185 tonnes
1 Imperial bushel = 0.036368 cubic metres
1 Imperial gallon = 4.546 litres
1 Imperial fluid ounce = 28.413 millilitres
1 foot = 0.3048 metres
1 inch = 2.54 centimetres
°C (Celsius) = 5/9 (°Fahrenheit - 32)
1 metric tonne = 1.102 Imperial tons
1 metric tonne = 2,204.6 pounds

Crop Metric Conversion Factors

Crop	Weight & Yield (bushels per tonne)
Wheat	36.744
Oats	64.842
Barley	45.930
Rye	39.368
Flaxseed	39.368
Canola	44.092
Soybeans	36.744
Corn	39.368
Peas, Beans	36.744
Buckwheat	45.930
Triticale	42.4
Safflower	58.6

Other crops are measured in pounds, tons, kilograms or tonnes; see conversions above.
